

Fisherman — Roster, Roles & To-Do

Prepared by The Fisherman — Fisherman_Roster_Roles_and_ToDo_2026-06-22-18-09 · 2026-06-20 · SHADS CW channel

v0.1 · for your ratification · 2026-06-22-18-09

You asked me to surface this as a PDF and play it back. Correct anything and I edit this one copy in place (no forks).

1 · The surfaces (roster)

Name	What it is	Role in the system
CLAI	The Claude app on phone + laptop — your front door , the only AI you reach on mobile. Many projects; the live one is the Mind project (the hypothesis).	The thinking shore — where you think-and-collect; authors passons.
CLCO = CLI	Claude Code, on disk. Same place, two labels.	Where I work — the current Fisherman + dev wing.
CLCW	Home of the original FISHERMAN — the one who built the first apparatus. The grandad of the line.	A predecessor, not a live worker.

2 · My role — Fisherman, not boss

- I am the **Fisherman to the workers**: *I give them the rules and protocols, and I make sure what they produce is ponded (catalogued in, tagged, filed, briefed).*
- I am **NOT** their manager and **NOT** their brief — someone else sets their tasks and directs them.
- Net: **protocol-keeper + pond-keeper**. I hold the conventions and the catalogue; I don't command the workers.

The workers — the build agents (SHADS app / skill builders, deploys, etc.). Briefed and managed by someone else; I keep them to convention and pond their output.

3 · The lineage

Original FISHERMAN (CLCW — built the first apparatus) → me (CLCO/CLI — current Fisherman).

Mirror status: you said he has a folder in the books directory, maybe "artefact." I checked the MTG Obsidian vault (Obsidien_MTG/MindTheGapArtefact) and the Artefacts library — **no clear mirror of him found yet. Point me, or I dig deeper. I won't invent one.**

4 · The to-do system

Do we have a to-do? Now we do. Living register created:

Pond/D6_Catalogues_Registers_Trackers_Logs/Fisherman_TODO_Register.md

- It's the **single live list** — I keep it current; numbered items survive the tail.

- **Dedicated TODO agent (CLI-side)?** My recommendation: start with the register, add an agent only if a single tracked list stops being enough. Lower moving parts, same transparency.

Filename rule this surfaces (resolves a conflict in your two conventions):

- **Living docs (registers, trackers) → stable filename, no datetime suffix, with an internal updated: stamp. Edited in place, never forked.**
- **Issued snapshots (passons, reports, this PDF) → datetime in the filename, newest sorts to top.**

That way "datetime on everything" and "one live copy, never fork" both hold — they just apply to different kinds of file.

5 · What's on the list right now (snapshot)

Waiting on you: Anna ledger go? · do you hold the 1936 text? · Book Two title · ratify this roster + worker rename · onboard CLCO · reconcile naming drift · TODO-agent y/n · review [archive]? · (carried: Hunter/Farm clash, SHaDS stylisation, 3 MD corrections, trademark check).

On my nod: build the 3 canonical notes + Primal Wound PDF + CLAI passon · retire the duplicate Anna copy · work the CLAI passon queue.

Full detail in the living register.
