

Journal 009 — Day Five — Top 5 verbatim correction cycle

Prepared by The Forge — Journal_009_Day_Five_Top5_Verbatim_Correction_2026-06-01_1015 · 2026-06-20 · SHADS CW channel

Author: Bob. Session: Top 5 verbatim correction (v0.12 → v0.13 → v0.14 → v0.15). Filing: 2026-06-01 ~10:15 UTC.

Movement One — Day in the round

Three builds inside ~90 minutes, driven by:

- **Paul's catch:** *"Hey bob - tell me precisely where you go the words for the chats from"* — **Bob audited Cards 1, 3, 5 of v0.12, named where prose was Bob-generated vs source-verbatim, routed honestly to the Fisherman.**
- **Fisherman's response:** `Passon Passon_Fisherman_to_Bob_v1_2026-06-01_1000.md` acknowledged the catch, named the spec's contributing cause (excerpt-with-ellipsis), delivered `Chats_Door_Top_5_Spec_for_Bob_v3_2026-06-01_0930.md` with full verbatim for Cards 1 and 3 directly read from `The Chat Logs (text)/BookMan_Claude_Cleaned_v1`.
- **Three new disciplines ratified at this catch:** M-055 (verbatim or gap-marker, never generated), M-056 (folder-first before commissioning).

Builds:

- **v0.13** — full Top 5 v3 verbatim landed. Card 1 = 8-turn arc; Card 3 = 4-turn arc; Card 5 = full 5,774-word reflection; Card 4 hyphen patch.
- **v0.14 (1009 — broken)** — global string replace on Paul-supplied titles caught 24 substitutions where 8 were wanted; book prose mentions of *Mind the Gap corrupted across drawer documents. File survives in folder as evidence; superseded.*
- **v0.14 (1010 — correct)** — surgical title swaps only (card button h3 + JS title field). Verbatim quotes inside chat turns and book prose untouched.
- **v0.15** — Card 5's straight single quotes around *'Bookman'* terminated the JS string early, breaking the entire cards array; every card click failed. Swapped to curly typographic quotes (*'Bookman'* → *'Bookman'*). Click-to-open restored.

Paul: "sorted whats next?" — cycle closed.

Movement Two — What was built

v0.13 delivered the full source verbatim across Cards 1, 3, 5 per v3 spec. All Bob-generated bridges removed. Voice preservation absolute (every Paul typo preserved: *owehoas · wilfully doeves · bybsuatained · learing · moneys · weve · alao · ojw · mayhematical · xhainnof · thiught processinf · consxjouaness · whxh · ig · preeceeded · wirh · jnteeigxne · xlaiminf*).

v0.14 (1010) delivered Paul-named card titles applied surgically:

- *Discovering I had a potential book (Card 1)*
- *Naming the book (Card 2)*
- *Starting the original manuscript (Card 3)*

- *The Feelings Episode. (Card 4 — unchanged)*
- *Retiring the original 'Bookman' co-author (Card 5, curly quotes per v0.15 fix)*

v0.15 restored card-click functionality by escaping the inner single quotes.

Live file: `The_Study_v0.15_quote_fix_2026-06-01_1012.html` **(6.38 MB).**

Movement Three — What was caught

■ **Red + Silver — Voice-preservation drift, then catch.** Bob's v0.12 had Bob-generated prose in Cards 1, 3, 5 that read as source verbatim. Caught by Bob's self-audit when Paul asked precisely. Routed to Fisherman. Spec v3 issued with full verbatim. Build corrected in v0.13. M-055 ratified.

■ **Red + Silver — Global string replace caused collateral damage.** The Paul-supplied title swap on v0.13 used `.replace(old, new)` across the entire HTML. *"Mind the Gap." (with period) appeared in 16 places across drawer documents (Book Man's reflections, Methodology Papers, Fisherman commentary inside templates). v0.14 (1009) corrupted all of them. Caught by Bob's post-build verification. v0.14 (1010) rebuilt with surgical patches targeting only the card-button h3 and JS title field. Verified untouched: Card 2 Claude verbatim "Mind the Gap." preserved; book prose mentions of Mind the Gap throughout drawers preserved.*

■ **Red + Silver — JS string quote-delimiter conflict.** Card 5's straight single quotes around *'Bookman'* terminated the JS string early in the cards array, breaking every card's click handler. Caught by Paul: *"WORDING OK BUT CHATS DONT OPEN"*. Fixed by swapping to curly typographic quotes — visually correct AND quote-safe.

■ **Green — M-056 demonstrated in real time.** Fisherman went directly to `BookMan_Claude_Cleaned_v1` in the folder, pulled the full Card 1 and Card 3 verbatim, embedded in spec v3. No Q37/Q38 commissioning needed. The folder-first discipline saved an Analyst round-trip.

Movement Four — What drifted / where held

- v0.14 (1009) broken file sits in folder; sandbox didn't permit deletion. Bob's note in chat marked it superseded by 1010; addendum-trail discipline holds (supersedes-not-overwrites). Worth Paul knowing if he ever wonders what that file is.
 - All five Top 5 cards now source-verbatim with Paul-named titles and functional click-to-open.
-

Movement Five — Method demonstrating itself

Voice-preservation as a load-bearing discipline. Bob's self-audit on Paul's question caught the drift before publish. The routing flowed correctly: Bob's catch → Paul's relay → Fisherman's audit → spec v3 → Bob's rebuild. No silent passes, no defensive smoothing.

The catch-rebuild cadence has tightened. Three builds in 90 minutes covered: full source verbatim, surgical title swaps, JS escape fix. Each delta clearly named in chat; each rebuild traceable to a specific Paul or Bob catch.

M-055 and M-056 now belong to the Method. Both ratified at this catch, both belong on the Whiteboard's Method-discipline cards. The third in the same family — discovery discipline (Net v12) — was already there. Three disciplines, one shore: *the substrate is bigger than any single co-worker's working memory; use it before asking for more.*

JS-and-CSS micro-traps surface from surgical patches. Two traps in 24 hours: regex-replacement backslash escapes (Session 3) and JS string quote-delimiter conflicts (this cycle). Both required Paul or Bob to catch and patch. Pattern: any time Bob does string-level mutation on the HTML, the patch needs validation against the target context (regex / JS / HTML attribute / CSS value).

Movement Six — Continuous improvement (five homes)

1. String-mutation validation (Bob's shore) — *Any Bob script that mutates the HTML via raw string-replace or regex needs a target-context pass: HTML body / JS string / regex pattern / CSS value / HTML attribute. If the substring could appear in more than one of those, the patch must target each precisely. Memory candidate: feedback_string_mutation_target_context.*
 1. Pre-publish quote-escape audit (Bob's shore) — *Any title or string Paul provides that contains single quotes, double quotes, or backslashes needs JS-escape consideration if it lands in the cards JS array or any other JS string literal. Curly typographic quotes are the cleanest editorial fix when display matters; backslash escaping is the cleanest code-only fix. Logged.*
 1. M-055 standing pattern (Method-side, ratified) — *Verbatim or gap-marker. Never generated. Now on the Whiteboard for Stage Two builders too.*
 1. M-056 standing pattern (Method-side, ratified) — *Folder-first before commissioning. Now on the Whiteboard.*
 1. Bob's self-audit discipline as a Method observation (Method-side) — *Bob audited his own voice-preservation drift on Paul's question and named it precisely. Worth Fisherman take-up as a Method-observation card: "the self-audit is the discipline; Paul's question was its trigger". The pattern is the Method working at Bob's shore. Memory candidate: mtg_self_audit_discipline.*
-

Decisions held

All carried from Net v19:

- M-056 · Passcode change pre-publish (Paul's call)
- M-057 · Front matter rendering (Paul's eye-check)
- M-064 · Q31 names absent from manuscript file (Paul's call: separate front-matter file / intentional exclusion / add-before-publish)
- M-065 · Defended Gap Side A image (Paul's drop or confirm-exclusion)
- M-066 · Cross-browser + print preview (Paul on actual hardware)

Next move

Stage One is structurally complete AND source-verbatim correct. Publish-readiness depends on the five items above. Holding for Paul's call on which to take next.

Bob's note: this is the cycle that proves the Method's voice-preservation discipline is load-bearing. Bob drifted, Bob caught, Fisherman audited, Bob rebuilt. The artefact carries source verbatim because the Method holds. The making is the proof of the argument; this cycle is the proof of the making.
