

Mind the Gap

Helicopter View — Chapter Spine, Coverage, Threads · V69 (current)

Coverage across the book's three working dimensions: AI (the technology), Behaviour (the psychotherapist's territory), Gap (the originated framework). Dots: ● light · ●● medium · ●●● heavy. Revised against the V69 baseline — reflects the Ch 6 rebuild, the new Ch 4 'Its Language' subsection, the Atomics2 move, and the 76m passage relocation to Ch 9. V69 adds the Crewe Q&A formatting in Ch 5 (bold questions, plain answers).

Ch 1 · Human Recognition

Open the book. Name the gap. Show how it fires.

Coverage	AI ●●	Behaviour ●●●	Gap ●●●
The Brain That Hears a Person	Why fluency triggers the social brain before analysis.		
The Common Thread	Reinforcement shapes both. Same class, different substrate.		
What This Book Does	Forty years of attention, now applied to the screen.		

Ch 2 · The Interpretation Trap

Project, transfer, mistake. The traps of misreading.

Coverage	AI ●●	Behaviour ●●●	Gap ●●●

Five Moments of Misreading	Five named traps, each with the architecture beneath.
The Clinical View	No therapist to slow projection. The ghost speaks uninterrupted.
The Trap Is Not the Problem	The trap is the gap made visible. Workable.
Not all Traps can be seen	Caught calling Claude 'he' at the optician.

▀ *Atomics2 removed to Ch4 in V63; chapter now single-direction (human projects).*

Ch 3 · Hidden Architecture

Lift the surface. Seven layers. No mind underneath.

Coverage	AI ●●●	Behaviour ●	Gap ●●
Two architectures, not one	Human side / system side, in parallel.		
Five rooms. One instrument.	Authority placed early before the deep dive.		
The Seven Layers	What every response is assembled from.		
What This Changes	Knowing the layers refines use. Literacy, not paranoia.		
No One on the Other Side	The anchor. No continuous mind exists.		

Ch 4 · The Machine Underneath

Maths, machine, language, money, motion. What the thing is.

Coverage	AI ●●●	Behaviour ●●	Gap ●●
The Maths	Token prediction. Forward-only. Bugs Bunny.		
The Machinery	GPUs, training scale, Libraries of Congress.		
Its Language	Labs' human words (Dreams) + the system's unbidden 'her'. Gender bias inherited at the training layer.		
The Token Economy	Token as mechanism, currency, and budget line.		
The Self-Learning Turn	Mythos/Glasswing. Finding in weeks what took years.		
Beyond the Screen	Wearables, ambient AI, the post-screen interface.		
The Honest Speculation	Where the labs themselves cannot predict.		

♣ V63: gained *Its Language* → now earns a Behaviour dot (was 0). V65: de-numbered.

Ch 5 · Drift

Reality intervenes at the ticket window, twenty turns later.

Coverage	AI ●●	Behaviour ●●	Gap ●●●
What Drift Actually Is	Crewe to Manchester. £18.80 becomes £16.00.		

The Ombudsman Case	Drift in a regulated environment. Stakes earned.
Drift in the Making of This Book	Drift caught inside the manuscript's own production.
The Clinical Parallel	Holding the thread in long therapy work.
What To Do About It	Double-bind. Two AIs. Convergence and sycophancy.

▀ Authority reminder (Draft A) added top of chapter in V62.

Ch 6 • Compression

Detail thins. Confidence holds. The dangerous asymmetry.

Coverage	AI ●●●	Behaviour ●●	Gap ●●●
What Compresses First	Four categories. Each with its degradation pattern.		
The Window Has a Limit	Finite window + the 'feeling of infinite' bridge.		
The Clinical Parallel	Human memory reconstructs; AI degrades. One merged passage.		
The Dangerous Zone	The climax — present enough to influence, not precise enough to trust.		
What To Do About It	Recovery discipline + tunnel close.		

▀ V64 rebuild: 8 subsections → 5. Timeline cut, parallels merged, DZ promoted. V66: 76m passage moved out to Ch9. RED-FLAG NOW RESOLVED.

Ch 7 • Fluency and False Confidence

Sounds certain. Often wrong. Verify what matters.

Coverage	AI ●●●	Behaviour ●●	Gap ●●●
What We Experience / What Is Actually Happening	The split named in two columns.		
The Confidence That Cannot Modulate	Suppressed I-don't-know is buried, not gone.		
The Therapy Room Version	Fluency as armour vs fluency as architecture.		
The Executive Implication	AI-produced board paper is a different risk.		
Always Apply Healthy Verification	Not cynicism. The appropriate response.		
The Question Behind the Question	What was I really asking?		

▀ Subsection count high (8 with sub-subs); 'What fluency feels like' + 'What was I really asking?' could fold.

Ch 8 • Hallucination — The Defended Gap

Hallucination explained, then reframed as defence.

Coverage	AI ●●	Behaviour ●●●	Gap ●●●

What hallucination is	Mata v. Avianca, Air Canada, Stanford. Plain definition.
The Defended Gap	Compression inward, hallucination outward. Same problem.
Where the signature came from	NGE-FOF. Thirty years of clinical work.
When the disposition becomes the model	Trained adaptation = working adaptation.
The line	The chapter's most-quoted line lives here.

■ 11 sub-headings — most in the book. 'Notes, citations, and a caveat' could become a footnote.

Ch 9 • The Instrument

Factory, boardroom, therapy room, AI room. One instrument.

Coverage	AI •	Behaviour •••	Gap •••
Room One: The Factory Floor	Blakeborough valves. The gap with a price tag.		
Room Two: The Boardroom	Confidence vs credibility. Fluency as currency.		
Room Three: The Therapy Room	2015–present. + the 76m/97 Bibles authority passage (moved here V66).		
Room Four: The AI Room	Plugs, Fuse Energy, Shipston. Same instrument, new room.		

One Instrument	The synthesis. Four rooms converge.
-----------------------	-------------------------------------

♣ V66: gained the 76m passage in Room Three → authority weight up. (Room headings are plain text, not bold.)

Ch 10 • The Maturity Spectrum

Four stages, then a fifth. Where you sit shapes what returns.

Coverage	AI ●●	Behaviour ●●	Gap ●●●
The Maturity Spectrum	Search / Assistant / Collaborator / Additional Intelligence.		
Additional Intelligence	The author's reframe of stage four.		
The Context Window Is Changing	Bigger windows don't close the gap.		
Outcomes, Not Prompts	Tell the system what good looks like.		
A Fifth Move	What sits above the four.		
The Bowlby Test	When to demand a human. CL-17.		

Ch 11 • Me, Myself or I

Six modes. Pick deliberately. Notice the default that fires.

Coverage	AI ●	Behaviour ●●●	Gap ●●
----------	------	------------------	-----------

Jean Bond / Behind the Mask	Opens on the canonical recognition line. 5 Nov 2006.
The Block and the Unnameable Dread	Firman. Russian Doll Therapy. Olivia.
A Note on the Clinical Source	Psychosynthesis, sub-personalities.
The Six Modes	Director, Structurer, Clarifier, Challenger, Analyst, Reflector.
What This Looks Like in Practice	Each mode with examples.
The Default Modes and What They Cost	Fixer, Entertainer, Asker.
The Integration	Range across modes is the practitioner's skill.

Ch 12 • The Dialect

Speaks English, different game. Learn it. Brief it. Accept its voice.

Coverage	AI ●●●	Behaviour ●	Gap ●●
The second dialect	AI English has its own architecture-shaped grammar.		
Voice, not my voice	Letting the system's voice land. It carries signal.		
Different rooms, different registers	When to shape, when to leave alone.		

Working with the dialect	The brief, the replay, the cross-check.
Audio is the next register	Voice arriving. Convergence accelerating.

■ 'A few smaller observations on dialect drift' reads as appendix; candidate to fold.

Ch 13 · Worker as a Service (WaaS)

Different model. Different world. CFO replaces CTO in procurement.

Coverage	AI ●●●	Behaviour ●●	Gap ●●●
What Changes	Workforce model, performance, cost, knowledge.		
OOAI — Outcome-Oriented AI	Best managers, not best programmers.		
What Doesn't Change	Human at the boundary, human at the depth.		
The Gap at Organisational Scale	Drift × ten thousand interactions = exposure.		
The Invisible Substrate	AI architecture as the WaaS world's dark matter.		
The Reversed Turing Test	Pret confirms the human in writing.		
From Boardroom to Shipston	Same literacy, market-town register.		

Ch 14 · Mind the Gap

The book demonstrating its own argument. Two intelligences, one gap.

Coverage	AI ●	Behaviour ●●●	Gap ●●●
Two Dads	Biological father at three. Ian Roebuck at fifty-six.		
What Intelligence Cannot Reach	Authority earned, not announced.		
Cancer Closes One Door and Opens Another	2017. The authority anchor.		
Grief and the Ultimate Gap	Studying grief while losing the father.		
The Bowlby Closing	Attachment as the bridge across survival.		

Ch 15 · Which Gap? This One.

Two hundred million years vs less than a century. Different branches.

Coverage	AI ●●	Behaviour ●●●	Gap ●●●
Federation vs single inference	A human is slices. AI is one architecture.		
The biological branch	Limbic system. Amygdala. HPA axis. 200m years.		
The mathematical branch	Turing to Opus. Less than a century.		
Same Big Bang. Different branches.	The book's deepest claim.		

Mind it.

The three-word close.

♣ Several bold canonical lines act as section breaks here + 'A Note on What This Book Doesn't Claim' (relocated Author's Note).

Threads — recurring themes across the book

Six themes recur. Each row shows where it fires. Thread 4 now spans Ch 4 explicitly, since 'Its Language' anchors the human-vocabulary argument that was previously scattered.

Theme	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Fluency triggers trust before analysis	•	•			•		•	•					•	
The gap requires plurality (human as federation)		•							•		•			•
The instrument is calibrated by what it has survived	•								•		•			•
Labs & system reach for human language (Dreams, gender, 'reflect')		•		•		•						•	•	

Same Big Bang, different branches	•			•				•						•
Reinforcement shapes both — same class, different substrate	•			•				•			•			

What changed since the V62 version: Ch 4 now carries a Behaviour dot (was absent) through 'Its Language'. Ch 6 is no longer a red-flag chapter — the rebuild cut it from eight subsections to five, merged the two therapy parallels, promoted the Dangerous Zone to its climax, and moved the 76m authority passage to Ch 9, where Room Three's authority weight rises accordingly. The spine now reads cleaner end to end; no chapter is currently flagged for structural rework.
